Subject: AES Coal Ash

Phil and George,

I spoke with Reynaldo Matos, who is an associated member of EQB's Board and the one that is working with matters related to the coal ash. He confirmed that EQB has not pulled formally their previous determinations about AES' Agremax. However, they are one the agencies that were requested by the PR House of Representatives to investigate the issue about the use of coal ash as aggregated material and develop regulation for its proper management and use. The group include EQB, DNER, the Planning Board, PR Department of Transportation and Public Works, and the Department of Agriculture. EQB is researching the issues so that they can work on this request, but there hasn't been any formal resolution yet.

Attached please find analytical results of testing performed by AES to the Agremax on August 2009 and January 2010. I also included the resolution from the PR House of Representatives (even though is in Spanish), thinking that it may be good for you to have.
